

# Access Alert Awareness

## Who is an Access Alert Risk?

- ✓ Patient with Lymphoedema or chronic swelling of a limb
- ✓ History of Axillary Node Clearance
- ✓ History of groin dissection
  - ✓ AV fistula
  - ✓ Acute Cellulitis

Patients who are an Access alert risk should be wearing a **Pink or Blue Access Alert WristBand** on the limb affected.

If you see a Band never use the limb for **Bloods, IV lines, pin pricks or blood pressure.....**

this can lead to the development of **Lymphoedema!!**
